

Satoshi Naru

Senior Full-Stack AI / ML / LLM Engineer

@ satoshinaru213@gmail.com <https://www.linkedin.com/in/naru-satoshi-2856923a0/>

<https://github.com/polymath1108> Tokyo, Japan

SUMMARY

Senior Full-Stack AI / ML / LLM Engineer with 10 years of professional experience designing, developing, and operating AI models, scalable web applications and AI-powered systems. Strong background in AI engineering, full-stack development, cloud-native architecture, and production-grade projects deployment. Demonstrated success in steering long-term product development and fostering cross-functional collaboration aligned with Japanese engineering standards. Proven ability to grow from junior developer to senior technical leader.

EXPERIENCE

Senior AI Engineer

Preferred Networks 08/2023 - 08/2025 Tokyo, Japan

- Led the development of machine learning models for computer vision and natural language processing (NLP) tasks.
- Built and optimized deep learning pipelines for large-scale datasets in industries like robotics and healthcare.
- Applied transfer learning, reinforcement learning, and state-of-the-art transformers in production-level systems.
- Collaborated with cross-functional teams to integrate AI models into production environments.
- Mentored junior engineers and conducted internal workshops on advanced ML topics.

Senior Full-Stack AI Engineer

Rakuten Group, Inc. 01/2021 - 07/2023 Tokyo, Japan

- Developed AI-powered applications for e-commerce and fintech using machine learning models for recommendations and fraud detection.
- Integrated NLP and image recognition technologies into web and mobile applications.
- Led the development of an AI chatbot platform using transformer-based models like GPT and Gemini for customer support.
- Optimized database performance and system scalability.
- Played a key role in system stability, documentation, and operational readiness.
- Worked closely with QA and operations teams to ensure zero-defect releases.

Full-Stack Engineer

SCSK Corporation 04/2018 - 11/2020 Tokyo, Japan

- Developed full-stack web applications using JavaScript, Java, and Python.
- Implemented backend business logic and frontend UI features.
- Participated in requirement analysis, system design, and code reviews.
- Collaborated with senior engineers following structured development processes.
- Gained a strong foundation in software quality, maintainability, and teamwork.
- Supported long-term customer projects with continuous improvements.

Junior Full-Stack Developer

LINE Corporation 06/2017 - 03/2018 Tokyo, Japan

- Developed basic frontend and backend features under senior supervision.
- Assisted in bug fixing, testing, and documentation.
- Learned the full software development lifecycle and coding standards.
- Contributed to team development with a strong learning mindset.
- Built solid foundations in web technologies and programming principles.

SKILLS

AI / Machine Learning

Machine Learning, Deep Learning, NLP, LLMs, RAG, Prompt Engineering, Transformer, Fine-tuning, Model Evaluation, Forecasting, Recommended System, TensorFlow, Keras, Hugging Face, Langchain, Scikit-learn, XGBoost

Full-Stack Development

React, Next.js, Vue.js, Typescript, Tailwindcss, Node.js, FastAPI, Django, Java, RESTful/GraphQL, SQL, MongoDB, Redis, OAuth

MLOps & Cloud

Docker, Kubernetes, MLflow, CI/CD, AWS, GCP/Azure

EDUCATION

Master of Information Science and Technology (MIST)

The University of Tokyo (04/2021 - 07/2023)

Bachelor's Degree in Computer Science

Nagoya University (04/2013 - 07/2017)

PROJECTS

Multimodal AI agent platform

2023 - 2025 Tokyo, Japan

Designed and led the development of a production-scale multimodal AI agent platform that combines large language models, computer vision, and real-time data pipelines to autonomously assist decision-making across e-commerce, fintech, and operations workflows.

KEY ACHIEVEMENTS

🔹 Drove Measurable Business Impact Through AI Systems Design

Reduced manual operational workload by 30-45% and improved decision accuracy by 20%+ by translating advanced ML and LLM research into enterprise-grade, fullstack AI products.

🔹 Established Scalable LLMops & AI Engineering Standards Across Teams

Defined and rolled out organization-wide LLMops and MLOps standards, including automated evaluation pipelines, model versioning, shadow deployments, and cost-aware inference routing across multiple LLM providers.
